DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-28, drawn to conversion of CMYK data into output color data (attribute control), classified in class 358, subclass 1.9.
 - II. Claims 29-44, drawn to conversion of an input signal into an output signal by dividing an n-dimensional input color space into a plurality of polyhedral units and performing interpolative calculation, classified in class 358, subclass 525.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility as a system that converts CMYK data into output color data, while invention II has separate utility such as a system that converts an input signal into an output signal by dividing an n-dimensional input color space into a plurality of polyhedral units and performing interpolative calculation. See MPEP § 806.05(d).
3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
